Mastering SCADA: ISA112 SCADA Life cycle and Architecture Insights

Wed
10 July
2024
16H00-17H00

In summer 2022, the ISA112 SCADA Systems Standards Committee released the second draft of its new ISA112 SCADA Systems Management Life cycle. This life cycle, covering project concepts through commissioning and operations, includes eight core activity groups with individual work processes. These groups provide a framework for long-term SCADA systems management. Since 2017, the life cycle has been widely adopted by utilities for both project-based and long-term management.

The SCADA functional architecture, similar to the Purdue Enterprise Reference Architecture (PERA) model, describes the integration of system elements from sensors to business enterprises. It supports scalable systems from small local setups to thousands of connections, including IoT and cloud integration.
